ComputeIT LITE

The ComputelT LITE range has the same build quality as the ComputelT™ and ComputelT™ SOLO and similar functionality. It offers a balance of specification versus price point; workflows for borrowing/returning a device are exactly the same as the full versions. This cost saving version allow you to loan 8 devices on the one terminal, saving space and ideal for smaller projects.

Specification compared to the full and LITE versions are:

- 15" Touch screen
- Time based charging 60 mins (adjustable)
- Only 2 borrow options
- No receipt printer
- 8 Locker bays included in main terminal
- Modula design – left hand side only.

To make the best use of space the terminal includes 8 integrated locker bays. A maximum of 7 additional 12 bay towers can be added to the original terminal, giving a maximum of 92 bays per installation. There is no limit to the number of terminals being used at any one site.

When devices are returned to the locker bay they are not made available for loan until 60 minutes has elapsed, the LITE version uses time based deployment only, therefore charge levels are not guaranteed before they are deployed.

Terminal with 8 lockers 21" x 21" x 77"

12 bay add-on units – left hand only 21" x 21" x 77"
